

RedBox Five Cab Pack for AxeFx II

This little "red" box emulates the speaker with tonal characteristics of a 4x12" cabinet, not just a mic'ed cabinet - you get a fatter, punchier and even more direct signal with far greater presence and bandwidth.

Tonal variations

Loose/Tight (L/T):

„Tight“ gives you a tone that's great for throatier riffs. „Loose“ conjures a softer sound character.

Vintage/Modern (V/M):

The „Modern“ voicing gives you the tones of modern speakers, while „Vintage“ yields a warmer tone associated with old-school cabs.

Small/Large (S/L):

„Small“ captures the sound of a small housing; „Large“ gives the you greater definition and added bass.

I captured all different variations of these 3 switches, labeled after the first letter of the function.

For example:

TML = Thight, Modern, Large

Have fun!

Cheers
