

With its original "User Cabs," Fractal Audio Systems pioneered the use of user-installable Impulse Responses (IRs) for speaker cabinet emulation in a hardware processor.

This firmware download includes 10 FREE sample IRs from the new Producer Pack Vol 3: The OwnHammer Studio Mix Collection UltraRes™ Edition, a collection of hundreds of UltraRes IRs for your Axe-Fx II running firmware 13 or newer.

Axe-Fx II Firmware Version 13 adds support for the new UltraRes™ speaker cabinet emulation technology. This proprietary technology increases the accuracy of speaker cabinet emulation to levels previously unattainable without massive CPU requirements or intolerable latency. UltraRes technology achieves the resolution of long IRs (up to 170ms) without added CPU burden or storage requirements.

The OwnHammer Studio Mix UltraRes collection includes every IR in the OwnHammer Studio Mix Libraries (as of Feb 7, 2014). They have been re-created in the new UltraRes format based on original full-resolution captures.

These IRs represent some of the most popular and well-received 3rd party IRs in the history of the Axe-Fx and we are proud to offer them in this highly anticipated new format.

Visit www.ownhammer.com for more details and additional IR offerings, and watch for more joint productions between Fractal Audio Systems and OwnHammer in the future.
