

Dyna-Cab Installation Guide

This document describes the installation of Dyna-Cabs into the Axe-Fx III.

Steps:

1. Ensure that Fractal-Bot is the latest version. Fractal-Bot can be downloaded from our website: <https://www.fractalaudio.com/fractal-bot/>
2. Extract the firmware and Dyna-Cab .syx files from the zip archive.
3. Launch Fractal-Bot.
4. Install the firmware first using the firmware image extracted in Step 2 following the instructions in the Firmware Update Guide.
5. After rebooting you may see a warning that the Dyna-Cab data is not installed or the wrong version. If so, press Exit.
6. Install the Dyna-Cab data using the data image extracted in Step 2. Drag-and-drop the .syx file onto Fractal-Bot as you would a firmware image. Send the data. Reboot when instructed.

NOTE: If you have previously installed the Dyna-Cabs you do NOT have to reinstall them when doing a firmware upgrade.
